The Inventory Analysis Report provides convenient access to your inventory information allowing you to analyze and report current inventory values and quantities. You can monitor inventory statuses such as available for sale, not in stock, overstocked, suggested for re-order, on-hand, on-order, committed for sale, committed for production, and transfers from location-to-location.

This report is also an invaluable aid in helping you make informed purchasing decisions and in identifying overstocked items that might be promoted by special prices or commission incentives.
